

# What to do in times of Corona?

- \* Despite the necessary spatial distance, maintain social contacts to counteract social isolation – for example, by telephone and on the internet.
- \* Do not put neighbors and friends who belong to a risk group in danger, but do support them – for example, you can help them with shopping.
- \* Help each other out with food and medicine instead of hoarding for your own household.
- \* Challenge your boss's decisions if they expose you to unnecessary risks, collectively refuse to work and act in solidarity with your colleagues.
- \* Help out friends who are struggling financially due to short-term work, loss of working hours, unemployment due to firm shutdowns, etc.
- \* Do not shift the responsibility for additional care work onto women – men, take on housework and care work!
- \* Revolt against healthcare cuts that have been going on for years, organize politically against them, and recognize that the impending health crisis is the result of a social order in which human needs are subordinate to profit.
- \* Be prepared for attacks on our working and living conditions that will arise in the wake of the economic crisis, and organize against them.

## Our demands are:

- 1.** Cut down all non-urgent work that can be postponed, but continue to pay wages! No lockouts or dismissals! Hygienic and safe jobs!
- 2.** Extend unlimited child sickness benefits to all parents affected by day-care and school closures!
- 3.** Suspend all Hartz IV sanctions, deportations and evictions in order to prevent additional hardship for vulnerable people!
- 4.** Solidarity with health care professionals and their demands!
- 5.** Public education instead of emergency regulations! Respect for freedom of assembly, movement and expression! Protection of personal rights and data!
- 6.** Safe shelter and sufficient medical care for everyone! Especially for refugees, homeless people, and women who suffer from domestic abuse and violence!
- 7.** Provide international aid to countries in need with medical equipment and the vaccine, once it is developed!
